

Download Dorsal And Ventral Streams

V1 transmits information to two primary pathways, called the ventral stream and the dorsal stream. The ventral stream begins with V1, goes through visual area V2, then through visual area V4, and to the inferior temporal cortex (IT cortex). The lateral geniculate nucleus (LGN; also called the lateral geniculate body or lateral geniculate complex) is a relay center in the thalamus for the visual pathway. Lake Ontario Fishing Action. While fishing on Lake Ontario, you will be catching primarily Salmon and Trout. We use controlled depth techniques with downriggers to target specific water temperatures and sonar readings where the fish are. Description & Behavior. Sea lampreys, *Petromyzon marinus* (Linnaeus, 1758), aka great sea lampreys, lake lampreys, lampreys, or lamprey eels, have a distinctive eel-like body, but unlike the eel their skeletons are made of cartilage rather than bone.
