

Download Fistime

hi, i have an asus motherboard and graphics card. the motherboard is the z270 prime-as and the gtx 1070 asus strix. these both have rgb and the aura sync compatibility, but i cant find the software to control the lights, can you help me find the software please. thanks

Is your system running at stock settings (no overclocked settings in your BIOS)? If not, install at stock speeds and reset OC parameters after a successful install. This menu's updates are based on your activity. The data is only saved locally (on your computer) and never transferred to us. You can click these links to clear your history or disable it.
