It is used extensively in modern winemaking, predominantly for its suppression of yeast and bacterial action, and its anti-oxidant properties. Procedure to do the Problem . Write the reactions for the complexes and the solubilities of calcite and CO_2 in terms of the following components: H^+ , HCO_3^- , Ca^{2+} , and H_2O . Write out the corresponding mass-action equations for the reactions. Solutions and solubilities. The ability of liquids to dissolve solids, other liquids, or gases has long been recognized as one of the fundamental phenomena of nature encountered in daily life. Functions. Soil is a major component of the Earth's ecosystem. The world's ecosystems are impacted in far-reaching ways by the processes carried out in the soil, from ozone depletion and global warming to rainforest destruction and water pollution.
