Instrument measurement range. Any real measuring instrument has a limited range over which it can accurately measure absorbance. An instrument must be calibrated and checked against known standards if the readings are to be trusted. This blog is meant to allow Fragment-based Drug Design Practitioners to get together and discuss NON-CONFIDENTIAL issues regarding fragments.

2.2. X-ray crystallography. Derivatives 2 and 3 could be crystallised from methanol:DMF (1:1). The single crystal X-ray structure of 2 showed that it crystallises as the DMF solvate with a single solvent guest in the macrocyclic cavity.

BGI. BGI is one of the world's leading companies in Genome Sequencing technologies of animals, plants and microbes. Their Services include genomics, transcriptomics, epigenomics, proteomics and Bioinformatics Data analysis.
